The PRIMERGY RX Rack Server family is the perfect platform to form dynamic infrastructures for your business processes today and in the coming decade. You will thus benefit several times over from our recognized experience in optimized data center technology and our innovative strength in developing energy-efficient and cost/performance-optimized rack systems for universal use. PRIMERGY rack servers, built upon industry standards, focus from a functional viewpoint on core features: energy efficiency, reliability, optimized for virtualization, ease of operation and maintenance, flexibility for your future. And thus they notably meet your requirements for outstanding cost efficiency. Optimal operating costs and long-term usability comply with the IT quality required by your customers. Our responsibility goes way beyond the hardware as our tailor-made service packages mean that you can rely on the best support for your IT during its whole lifecycle.

PRIMERGY RX300 S5

The consolidation of dedicated servers and the use of efficient virtualized run environments provide measurable benefits and new flexibility regarding IT operations management. Virtual servers can thus be moved to other servers during ongoing operations and enable maintenance work to the hardware platform without any operational interruption. Active virtual servers can be flexibly moved to systems with higher performance for operation during peak-load times. Test systems can be very easily converted via live migration to production systems. Virtualized environments are the top application for RX300 systems and their new multicore CPUs in the Intel® Xeon® 5500 series. In this situation, several operating systems plus the installed applications have to run simultaneously on one and the same physical hardware. RX300 S5 provides all the platform features required for efficient virtualization:

- High, scalable I/O performances with PCIe Gen2, x4/x8 Turbo mode, up to 7 free PCIe slots - so that disk I/O and network/SAN accesses do not become a bottleneck!
- The generosity of the maximum 144 GB main memory for a high-performance determinable, optimal sizing of the virtual server environment so that the main memory does not become the point of contention for the virtualization software as well as the consolidated applications and the operating systems.
- Top performance with state-of-the-art Dual Quad or Turbo Quad-Core Intel® Xeon® 5500 series CPUs as well as double I/O performance with PCIe Gen2.0 - so that every virtual system can work at a higher performance level than before.
- The reliability of a premium server system in a space-saving 2 U design so that the cost benefits arising from standardized rack servers and virtual systems do not become a survival risk!The reliability of the RX300 server platform also leaves nothing to be desired in other application areas, e.g. as database servers or application servers for business-critical processes.
